

Prototype your module with Odoo

Export your customizations as a module

by Maxime Chambreuil

Speaker

Odoo Practice Leader at Savoir-faire Linux

Vice-President of the Odoo Community Association

Agenda

Why a prototyping module?

How to prototype?

Roadmap

Demo

Why a prototyping module?

- › To extract all the customizations
- › To avoid data entry effort duplication
- › To test everything on a live instance
- › To create a customer profile with all its dependencies
- › To prepare the work for a developer
- › To ease collaboration between business analysts and developers
- › To gather different scenario in one module:
 - Module recorder
 - Scaffolding
 - Odoo Builder

Currently supported (Version 0.3)

- › Module information (name, description, dependencies)
- › Custom fields and objects (basic, selection, x2x)
- › Customizations on fields
- › Menu items and window actions
- › Views

Roadmap

- › Version 0.4
 - Module icon
 - Screenshots
 - Export multiple modules
- › Version 0.5
 - Security files (groups, access rights, record rules)
 - Data and demo data
- › Backlog
 - Reports
 - Workflows, nodes, transitions, actions
 - Web stuff (controllers.py and templates.xml)
 - Attachments with data
 - Any other ideas?
